Prolonged and repeated exposure to high concentrations may result in the loss of appetite, or liver, kidney or nervous system damage. This product contains Benzene, prolonged and repeated exposure to benzene has been associated with Anemia and Leukemia in Humans. This product may produce or enhance neurotoxic symptoms when used in conjunction with other organic solvents. Symptoms of Neurotoxicity may include numbness or tingling of the extremities. Exposures to this product should be minimized whenever possible. The use of protective equipment is strongly recommended.

Reports of animal studies using both sexes of several species have shown that kidney effects can occur in male rats after prolonged and repeated inhalation exposures to light hydrocarbon vapors of the general type represented by this product. While the effects are of low-order of severity in animals, the implications of these results have not yet been determined.
