Splash Zone Coating and Underwater Epoxy Paste
Product #OSVX765

DESCRIPTION

Product #OSVX765 Splash Zone Coating and Underwater Paste is a moisture-insensitive, two-component, 100% solids epoxy-resin system. When mixed at a 1:1 ratio, by volume, this product produces a paste-like material that is ideal for protection or restoration of concrete, steel and timber piles and other structural elements in marine environments.

ADVANTAGES

- Convenient 1:1 mixing ratio
- Long pot life
- Available in a Fast Cure
- Hand-applied
- Can be used above, below, or at the waterline
- Resists wave action
- Restores structural integrity
• Bonds to wet surface

MIXING

Mix only as much as you can use within 2 hours or less at 70 degrees F. If the temperature is higher your working time will be much shorter. It is always better to start with smaller batches and to gradually increase the size, to be sure that you have enough working time. Material temperature should be a minimum of 60°F for ease of mixing. Mix "A" & "B" Components together, by hand, until a uniform gray color is achieved.

SURFACE PREPARATION

Remove all deteriorated material, barnacles or other marine growth by mechanical abrasion, water or sand blasting. Typically the better the surface preparation, the better the bond. To avoid contamination, apply OSVX765 Splash Zone Coating and Underwater Paste to prepared surface as quickly as possible. It is always best to do a mockup to verify that your surface preparation is adequate.

APPLICATION

For best results, apply Product #OSVX765 Splash Zone Coating and Underwater Paste by hand using tight-fitting rubber or plastic gloves. (Wet gloves with slightly soapy water before working with material.) Press material onto surface and knead into place in maximum lift thickness of approximately 2”. Smooth gently by rubbing with gloves using water as a lubricant. For smaller areas you can use a concrete grout bag.

LIMITATIONS

Do not thin Product #OSVX765 Splash Zone Coating and Underwater Paste. Since conditions content vary greatly, it is recommended that a sample application be made to ensure the intended performance. Do not apply when water or ambient temperature is below 50°F.
**COVERAGE**

One (1) gallon of **Product #OSVX765 Splash Zone Coating and Underwater Paste** will yield 231 CI and cover 12.8 SF @ 1/8" thickness 125 mil.

**PACKAGING**

**Product #OSVX765 Splash Zone Coating and Underwater Paste** is packaged in four (4) gallon and ten (10) gallon units.

**SHELF LIFE**

Two (2) years for Components "A" and "B".

**CAUTION**

**Product #OSVX765 Splash Zone Coating and Underwater Paste** Contains A Component contains epoxy resins. B Component contains organic amines which are strong sensitzers. **WARNING!** May cause skin sensitization, burns or other allergic responses. Avoid inhalation of vapor. Use good ventilation, particularly if material is heated. Prevent all contact with skin and eyes. Wear protective clothing, goggles and/or barrier creams. Wash thoroughly after handling. **FIRST AID:** In case of contact, immediately flush eyes or skin with plenty of water for at least fifteen (15) minutes. Remove contaminated clothing before re-use. Discard contaminated shoes.

Proper mixing and installation is critical to the optimal success of all product. See Installation Tips, Techdata, & MSDS for more details on our products. Be sure to contact us with any questions and/or concerns that you have.
